ALLEGION™, FEENICS ANNOUNCE SCHLAGE® LE WIRELESS LOCK INTEGRATION *Collaboration Offers Installers Scalable Cloud-Based Security Management Solution*

Indianapolis, Ind., (October 16, 2017) – Allegion™, a prominent provider of security products and solutions, announced that Schlage® LE wireless mortise locks now seamlessly integrate with Keep by Feenics™, a leading access control as a service (ACaaS), cloud-hosted platform. The integration debuted at the Feenics booth (#4285) during the American Society for Industrial Security (ASIS) International's 63rd Annual Seminar and Exhibits, held Sept. 26-28 in Dallas.

"We are excited to expand our offering with Allegion to include the Schlage LE," said Brian Matthews, director of sales for Feenics. "This latest collaboration pairs our award-winning cloud-based access control solution with the security and convenience of Schlage's wireless locks, delivering a reliable, scalable solution to facilities of all sizes."

Keep by Feenics is a secure and agile solution that can be managed from anywhere there is an internet connection using a simple and intuitive interface. The platform is built using open architecture hardware for limitless interoperability, plus it is fortified by the security, disaster recovery and redundancy of Amazon Web Services (AWS). When paired with the Schlage LE lock, users can bring electronic access control deeper into any facility. Without the need to run wires, these locks can be installed on more interior openings within the same cost parameters as a wired option. Together, these offer an integrated access control solution that can be tailored to fit varying facilities — from one opening to a global enterprise.

"For customers looking to implement or grow access control, the Schlage LE is an easy, cost-effective way to upgrade traditionally mechanical doors to electronic smart credentials," said Scott Dennison, leader of Allegion commercial electronic locks and software. "Integrating with an industry-leading platform like Keep by Feenics takes security to the next level. From video and intrusion detection to IoT, building automation and other applications, Schlage using Keep creates more secure, convenient and efficient environments. And both are flexible by design to evolve with changing security needs over time."

Previous integrations include Schlage NDE and AD-400 wireless locks.
